European COVID-19 Data Platform support to your infectious disease research

Consortia applying to the Horizon Europe topic **HORIZON-HLTH-2023-DISEASE-03-07: Relationship between infections and non- communicable diseases** *are encouraged to link to the COVID-19 Data Platform.*

Connect with us:

- Deposit your infectious disease data in public databases
- Access publicly available and interconnected datasets
- Work with leading data management experts across Europe
- Make your data FAIR (Findable, Accessible, Interoperable and Reusable)

Deposit data

Infectious disease data can be deposited in the databases of EMBL-EBI until the data owner is ready to make them publicly available. Access rights can be granted e.g. to collaborators or reviewers of publication. Deposition increases the value of data by making it more discoverable and cited, and it will be plugged into a wider ecosystem linked across disciplines and diverse data types.

Access data

Access and analyse thousands of datasets from the COVID-19 Data Portal and the Pathogen Portal

Data management expertise

Connect with experts in each country who help with uploading, annotating, indexing and linking data. Use our resources to help create data management plans.

Analyse data

Reuse analysis workflows and publish your own analysis workflows.
